

For the care of RUGS we suggest:

- To dry-clean.
- For a daily cleaning, use delicately the vacuum cleaner.
- The rug can be shaken out, but cannot be hung.
- The rug should be put lying down on a surface first on a side and then on the other side.
- The rug cannot be flapped in order to avoid deformations on the texture and on the fibers.
- To remove some superficial stains can be sufficient to use a sponge with a neutral cleanser.
- If the rug is stained by food or drink, first remove delicately the remains, then we suggest to use blotting paper on the stain and to pour sparkling water. If necessary use also a specific cleanser for rugs.
- Finally we suggest letting the damp part of the rug dry, avoiding the exposure to the sun.
- A solution made of water and alcohol (two spoons of alcohol each litre of water) is suggested for stains of grass, chocolate and the resistant ones. Let the rug dry very well before walking on it.
- Another method for cleaning rugs is to use a shampoo or a dry foam, but it must be paid attention in order not to impregnate the rug and it is necessary to use the vacuum cleaner very well after using it.
